

Bring science alive with [eduMedia](#)! Remember the science posters in your class when you were in school? Now imagine having 1000 *interactive* STEM posters available to you on your computer to share with all of your students.

Easily animated, you can show hard-to-understand concepts in all the sciences and even maths.

Now imagine easily recording your explanation, in your voice, and adding it to your interactive eduMedia “poster”. Students will hear your familiar voice explaining science concepts to them. Or flip it around and have your students add their voices, explaining the concept to you instead.

Here are real life examples of teachers who have used this feature.
